## **DETAILED ACTION**

### ***Oath/Declaration***

The declaration is acceptable.

### ***Drawings***

The drawings are approved.

### ***Specification***

The specification has been checked to the extent necessary to determine the presence of all possible minor errors. However, the applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

### ***Claim Rejections***

#### ***Claim Rejections - 35 USC § 112***

Claims 1-19 and 23-27 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Correction or clarification is required.

In claim 1, it is unclear what the "known previous logical state" is and how the differential amplifier can detect a transition in the incoming signal relative to the known previous logic state and how this limitation is read on the preferred embodiment or seen on the drawings. The same is true for claims 11 and 19.

In claim 2, it is unclear how the result can drive an output signal. The same is true for claims 4-5, 13-14

In claim 11, it is unclear how the controller can coupled the first result to the output terminal and how this limitation is read on the preferred embodiment or seen on the drawings. The same is true for claim 19.

In claim 6, it is unclear how the reference can be "synchronous" with the "incoming signal" since they are not from a synchronous source. The same is true for claim 15

In claim 23, the recitation "the comparator" on line 6 and "the other comparator" on line 8 lacks antecedent basis.

The remaining claims are dependent from the above rejected claims and therefore also considered indefinite.

### ***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-27 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-37 of U.S. Patent No. 6,160,423. Although the

conflicting claims are not identical, they are not patentably distinct from each other because both inventions disclose a circuit comprising:

- a first comparator.
- A second comparator
- A first controller and a second controller.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 6-8 are rejected under 35 USC 102 (e) as being anticipated

Dumas (US Pat. 6,122,331). Figure 6 of Dumas discloses a detection circuit comprising an amplifier (55).
